上海弘旭空调设备有限公司

SHANGHAI HORNG SHIUH AIR CONDITIONING EQUIPMENT CO.,LTD.

产品简介

Product Introduction

● 概要

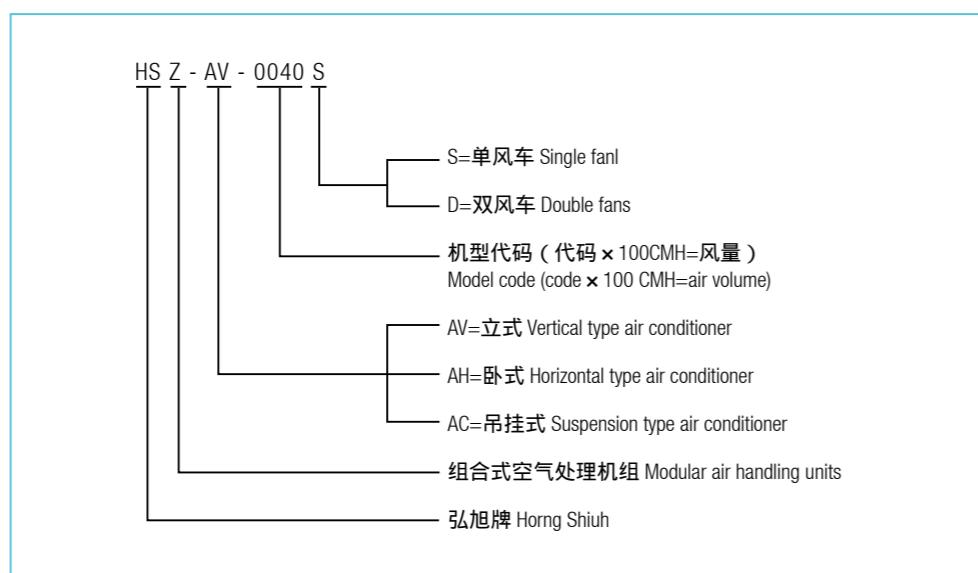

弘旭牌空气处理机组是综合国内外各名厂产品的长处，以精湛的生产技术和丰富的经验方法而开发设计制作。弘旭牌空气处理机组因其机种广、型式多、产品独特、性能优越，而受到各行各业用户的青睐。在环境的通风、温度、湿度、新鲜度与洁净度方面的控制及处理，我公司更有着专业的设计和丰富制作经验，弘旭牌空气处理机组是您值得信赖的产品。

● Summary

Horn Shiu air handling units are developed and designed by synthesizing the strength of the products of all famous domestic and foreign companies, and also by exquisite production technology and rich experience. Horn Shiu air handling units are welcome by customers in all works of life because of the variety of their models and types, their uniqueness, and the superiority of their performance. In terms of the control and treatment of ventilation, temperature, humidity, freshness, and cleanliness of the environment, our company has rich professional design and manufacturing experience. Horn Shiu air handling units are worthy of trust.

型号说明

Model Description

● 特点

● 机种系列广泛

本公司所设计制造的空气处理机组风量由 1600CMH~200000CMH，能量则由 1.5RT 至 950RT，其冰水盘管排数为 2 排 ~12 排。加热盘管则有热水盘管及蒸汽盘管，其排数分别为 1 排、2 排、3 排、4 排。此外尚有电热加热器及各式加湿装置，并可根据客户各种特殊规格及要求进行设计制作。

● 震动小、噪音低

选用著名品牌电机（东元、大同、西门子以及 ABB 等厂牌），风机均经过精密的静力及动力平衡校正测试，符合 AMCA 认证测试，而且风车组大多采用内部独立防震设计，噪音小和震动值小。

● 效率高、能量足

盘管散热面积大，热传导效率高，采用逆流换热设计，冷却能量强，并能够彻底排尽盘管内冷冻水。

● 拆装容易、服务简便

箱体可根据实际需要分段结合而便于吊运，也可以散件运输，现场安装，过滤网清洗及拆换容易，轴承加油嘴伸至机体外加油（免维护轴承除外），服务维修简便。

● Characteristics

● Extensive Model Series

The air volume of the air handling units designed and manufactured by our company ranges from 9000 CMH to 200000 CMH, energy from 1.5 RT to 950 RT. The line numbers of the cooling coil are 2~8. The heating coil consists of hot water coil and steam coil; and their line numbers are 1, 2, 3, and 4 respectively. Besides, there are electrical heaters and various types of humidifying devices. We also design and manufacture according to customers' special specification requirements.

● Small Vibration and Low Noise

We select and use famous brand motors (e.g. TECO, TATUNG, SIEMENS, ABB, etc.). The air blower passes through precise static and dynamic balance calibration tests and meets AMCA certification test. The internally independent anti-vibration design is adopted for the fan unit, so the noise is small and the vibration is little.

● High Efficiency and Sufficient Energy

The heat elimination area of the coil is large and its heat conduction efficiency is high. Countercurrent flow design is adopted, so the cooling power is strong and the chilled water in the coil can be thoroughly drained.

● Easy Disassembly and Simple and Convenient Service

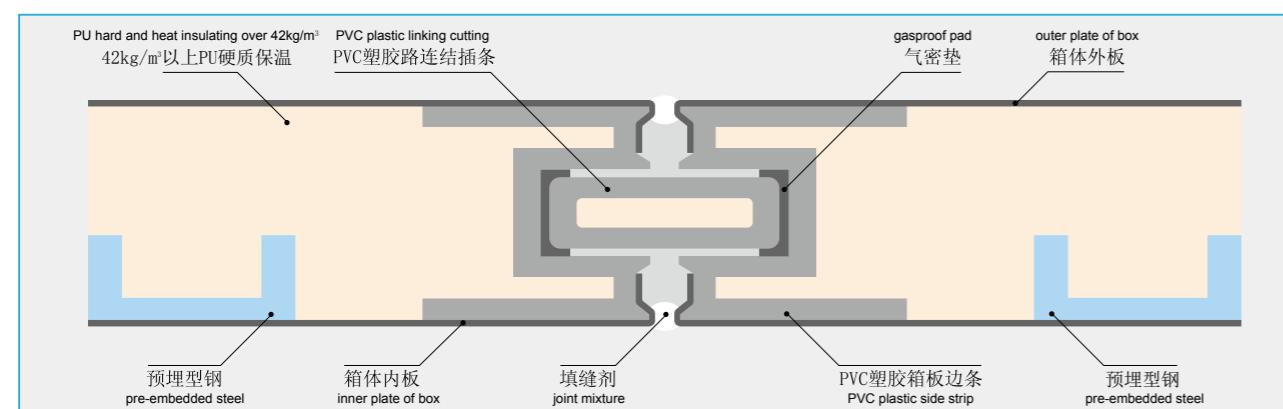

According to the actual need, the box can be combined in sections and thus is easy to be moved by crane. The box can also be transported in parts and installed on site. The filter screen is easy to clean and replace. The lubricator fitting of the bearing extends outside of the machine body (excluding maintenance-free bearings), so service and maintenance is easy.

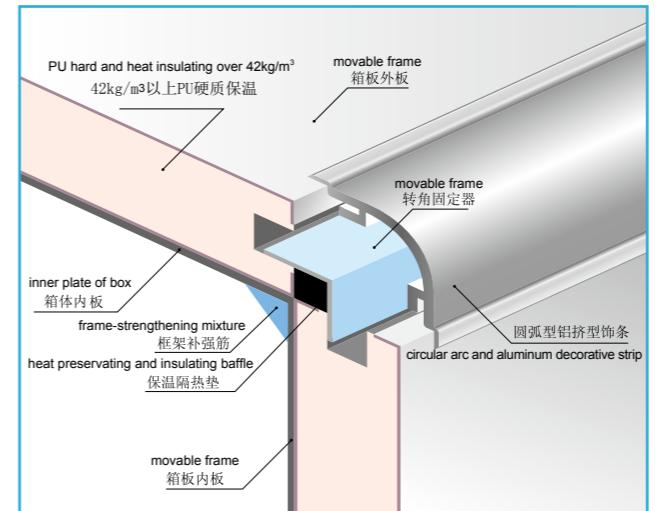

空气处理机组箱体说明

SPECIFICATION

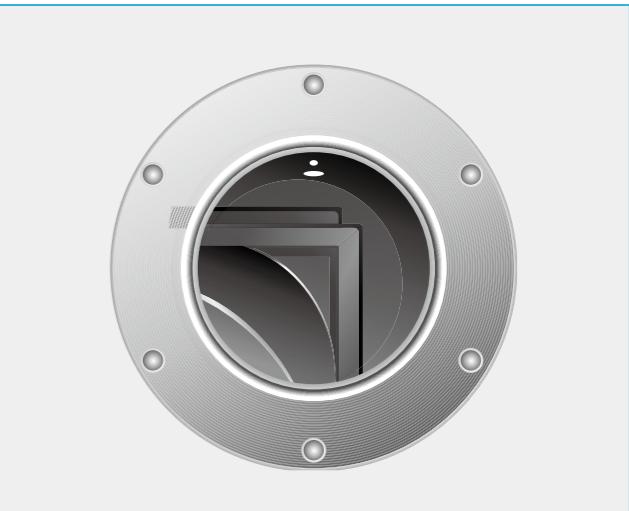

- 弘旭 PU 箱板组合式空调箱，系采规格化箱板的组合方式，其生产虽已标准化，但其内外铁板的材质可依各不同环境的需求采镀锌板，烤漆板，PVC 护膜铁板或不锈钢板制作。至于箱板的厚度，则可因箱体内外温差或箱体所承受压力的差异而有 30mm 厚，50mm 厚（60mm 厚）等不同规格作最佳的选择。
- 弘旭 PU 箱板的热绝缘及其抗压强度，系来自 42kg/m³ 硬质 PU 发泡保温材，但为求保证 PU 发泡时不受环境温度与气候的影响，本公司采用设有恒温控制的压模以从事 PU 发泡的作业。在抗压强度方面，除了来自 PU 发泡的强度外，每一箱板于灌注 PU 发泡前均已预埋型钢以增加强度，同时做为固定空调箱的零组件。
- 弘旭 PU 箱板为求达到其所组成的箱体绝不结露的要求，在设计上已将造成箱体结露的主要——“内外金属件相连”的现象完全屏除（见图一），同时为求箱体的气密性，而在箱板组合的过程中有着两道增加箱体气密的作业措施，将箱体的泄露率降至最低而符合目前业界对高品质的要求。
- 弘旭 PU 箱板所组成的箱体，系采用标准化的规格箱板所组成。因此箱体在配合国际标准规格滤网与常用的盘管表面风速做配合的前提下，本公司将箱体设计为每 6 英寸为一单位的模组化外形尺寸，以迎合国内空调在设计及使用上的各种不同需求，达到既是规格化产品又能配合设计者与使用者要求的完美境界。同时为求造型上的美观并考虑现场分解及组装的便利性，箱体的转角以铝制型材配以圆弧造型（见图二），以突破传统空调设备给人的刻板印象。
- 弘旭 PU 箱板组合式空调箱，为求维修保养上的便利性，在所属空调系统心脏的风车段保养门上可选择地配备有检视窗（见图三），使得制程用空调箱在不能停机的情形下，也能检视风车运转状况是否正常以做必要的应变准备，而降低与避免空调系统的异常当机，确保制程环境的理想与顺畅。

图三

- Horng Shiuh PU combined air-box board cartons, using the combination of standardized box board, its manufacture has been Standardization, the monolithic material inside or outside can also adopt galvanized plate, PVC cuticle iron or stainless steel plate to product according to the different environment need. As for the thickness of plate, due to the temperature difference between inside and outside the box or the tank under pressure by the difference, also have 30mm thick, 50mm thick, 60mm thick, etc different specifications to make the best choice.
- Horng Shiuh PU box board's thermal insulation and compressive strength are from the 42kg/m³ rigid PU foam material moisture. To assure the PU foam will not subject to the environmental humidity and climate impact, our company use the die without constant temperature control to carry out PU foam operations, in compressive strength, besides the intensity of PU foam, all the box boards have been pre-buried steel to increase intensity before PU foam and as a fixed air-conditioning components as well.
- In order to meet the requirement, Horng Shiuh PU box board completely excludein the the phenomenon of both the metal pieces inside and outside connected (figure 1). In addition, for the sake of box gastightness, two operations to increase the gastightness are added during the process of box plate.
- The cabinet composed by the Horng Shiuh PU box board is msde by the box board in standard specification. Therefore, with the filter in international standards and under the cooperation with commonly used coil surface wind speed, our company designed the box to modular dimensions of every six inches as a unit to meet the diverse needs in design and use, not only standardized, but also consistent with the designer's and the user's requirements. Moreover, For the sake of modeling on the appearance and the ease of decomposition and assembly, the corner cabinet is used by aluminum profiles with the arc-type (figure 2), breakthrough the traditional style to the people's stereotyped image.
- Horng Shiuh PU combined air-box board cartons are alternatively equipped with inspection windows in their hearts of the air-conditioning system—the door maintenances on windmill paragraph for the sake of the maintenance on facilities (figure 3). So that the process using air-conditioning box can detect windmill operation status normal or not and make the necessary contingency plans at the case of cannot stopping, thus, the air-conditioning systems can reduce and avoid abnormal crash, and ensure the process environment ideal and smooth.

PU 箱板组合式空气处理机组

PU Boxboard Modular Air Handling Units

特点

本系列空气处理机组，其箱体制造方式是以 30mm、50mm (60mm) 厚的硬质 PU 发泡箱板加以组合，而其底座则采镀锌材质的组合式活动底座。箱体的转角是以圆弧型铝合金饰条加以装饰，以突破传统空调设备外观的单一性。机组风量可由 3400CMH 至 200000CMH，能量因使用环境与用途的不同可自 5RT 至 950RT，其冰水盘管一般有 4 排、6 排及 8 排。因 PU 箱板组合后，箱体内外非常平滑美观，不易集尘，所以在加装各式过滤网后，是目前最合适用于无尘室、无菌室等场合的空调系统中，同时此系列机组的最大特色是当搬运路线受建筑结构限制的工地时，能采散装进工地后再于现场就地组装以克服空气处理机组的搬运问题。

Characteristics

The box of this series air handling units is made by combining 30-mm, 50-mm (60-mm)-thick hard PU foaming boxboard. The modular adjustable base is made of zinc-plating material. The corners of the box are decorated with circular-arc-shaped aluminum alloy trim strip. This design breaks through the monotony of the appearance of traditional air conditioning equipment. The air volume of the air handling units ranges from 3400 CMH to 200000 CMH; the energy varies from 5 RT to 950 RT according to different operational environment and functions. The line numbers of the cooling coil are 4, 6, and 8. Combined by PU boxboard, the box is smooth and artistic inside and outside, making it difficult for dust to collect. Thus after installing various filter screens, this series air handling units is best suited for air conditioning system in dust-free rooms and sterile rooms. A special feature of this series air handling units is that it overcomes the problem of transporting. When the transporting rout is limited by the building structure, the units can be transported to the site in parts and assembled on site.

材料规范说明

● 箱体：

内外箱板可采镀锌板、烤漆板、盐化钢板或不锈钢板等不同组合的材质制作，保温则为 42kg/m³ 以上的硬质 PU 发泡。空调箱底部同样采同规格的 PU 发泡箱板，形成六面封闭保温的箱体结构。在抗压强度方面，除了来自 PU 发泡的强度外，每一块箱板在灌注 PU 发泡前均已预埋型钢以增加强度，同时作为机组零配件固定之用。机组的基座则采镀锌材质的组合式活动底座。

● 水盘：

采三面倾斜制作方式，且为内置式。其材质为不锈钢板。

● 风车：

视系统静压的需要可采离心前倾式、后倾式或轴流式风车，此外还可采无蜗壳后倾式风车，风车组均采独立式内避震。

● 盘管：

液管为 5/8"OD 及 1/2"OD 紫铜管，其厚度有 0.38mm、0.41mm、0.6mm 及 1.0mm 厚，鳍片可采紫铜片或铝片。紫铜片的厚度自 0.12mm 至 0.18mm。铝片则可分为一般铝片及蓝波发色处理铝片，其厚度自 0.115mm 至 0.2mm。盘管的端侧板可采镀锌板或不锈钢板，集流管可采镀锌钢管、铜管或不锈钢管。

● 其它：

滤网可依需要设计，加热装置可采热水盘管、蒸汽盘管或电热管，加湿装置则可采不锈钢加湿管、电热盘式加湿器、电极式加湿器或超音波加湿器等。另可选配加装 LED 检视灯、检视窗、压差计及挡水板等。

Material Specification

● Box:

The inside and outside boxboard is made of different combination of materials including galvanized sheet, paint sheet, salinization steel plate, and stainless steel plate. It uses hard PU foaming boxboard whose density is above 42kg/m³ for heat preservation. The bottom of the air conditioning units is made of the same material, thus forming an enclosed heat-retaining hex structure. In terms of compressive strength, in addition to the strength from PU foaming, each boxboard has been pre-cast with profile steel before being filled with PU foaming in order to increase its intensity and fasten the components. The modular adjustable base is made of zinc-plating material.

● Drain Pan:

The drain pan is three-side tilted and built-in. Its material is stainless steel plate.

● Fan:

According to the requirement for static pressure of the system, centrifugal forward-curved type, backward-curved type, and axial-flow type fans can be adopted. In addition, non-volute backward-curved type fans can be adopted. The fan units are of the independent type and internally shake-proof.

● Coil:

The pipe is made of 5/8"OD&1/2" OD red copper with a thickness of 0.41mm, 0.6mm, and 1.0mm. The fin can be made of red copper or aluminum sheet a thickness of 0.12-0.18mm. The aluminum sheet falls into two categories, i.e. ordinary aluminum sheet and blue wave colored aluminum sheet. The thickness of the former ranges from 0.125mm to 0.2mm; and the latter has two kinds of thickness, i.e. 0.125mm and 0.2mm. The end plate of the coil can be made of galvanized sheet or stainless steel plate. The collecting pipes are all made of galvanized steel pipe, brass pipe or stainless steel pipe.

● Others:

The filter screen can be designed in accordance with the actual need. The heating device can adopt hot water coil, steam coil, or electric heating coil. The humidifying devices can adopt stainless steel humidifying pipe, electric hot tray type humidifier, electrode type humidifier, or supersound humidifier, etc. In addition, LED viewing light, sight glass, differential gauge, watertight shutter, etc. can be alternatively installed.

PU 卧式空气处理机组

PU Horizontal Air Handling Units

特点

本系列空气处理机组，风机和盘管采前后水平安装。风量由 3400CMH 至 200000CMH，能量因使用环境与用途的不同可自 5RT 至 950RT，其冰水盘管一般有 4 排、6 排、8 排及 10 排。功能段可依据不同的设计需求加以组合，结构形式灵活多样，卧式机组维修保养方便，气流运行顺畅。

Characteristics

The air blower and coil of this series air handling units are installed horizontally front and back. The air volume ranges from 3400 CMH to 200000 CMH. The energy varies from 5 RT to 950 RT according to different operational environment and functions. The line numbers of the cooling coil are 4, 6, 8, and 10. The functional section can be combined according to different design requirements into flexible and various forms of structure. It is convenient to repair and maintain the horizontal air handling units. The air current runs smoothly.

材料规范说明

- 箱体**：内外箱板可采镀锌板、烤漆板、盐化钢板或不锈钢板等不同组合的材质制作，保温则为 42kg/m^3 以上的硬质 PU 发泡，箱板厚度可视需要分为 30mm、50mm (60mm) 厚。在抗压强度方面，除了来自 PU 发泡的强度外，每一块箱板在灌注 PU 发泡前均已预埋型钢以增加强度，同时作为机组零配件固定之用。机组的基座则采镀锌材质的组合式活动底座。
- 风车**：视系统静压的需要可采离心前倾式、后倾式或无蜗壳式风车，所有型式的风车组均采独立式内避震的设计。风机驱动方式可采皮带式或联轴器直接驱动方式。
- 水盘**：三面倾斜制作方式，且为内置式。其材质为不锈钢板。

Material Specification

Box: The inside and outside boxboard is made of different combination of materials including galvanized sheet, paint sheet, salinization steel plate, and stainless steel plate. It uses hard PU foaming boxboard whose density is above 42kg/m^3 for heat preservation. The thickness of the boxboard falls into three categories as needed, i.e. 30mm, 50mm (60mm). In terms of compressive strength, in addition to the strength from PU foaming, each boxboard has been pre-cast with profile steel before being filled with PU foaming in order to increase its intensity and fasten the components. The modular adjustable base is made of zinc-plating material.

Fan: According to the requirement for static pressure of the system, centrifugal forward-curved type, backward-curved type, and axial-flow type fans can be adopted. In addition, non-volute backward-curved type fans can be adopted. The fan units are of the independent type and internally shake-proof. The driving mode of the air blower can be belt type or coupling direct driving type.

Drain Pan: The drain pan is three-side tilted and built-in. Its material is stainless steel plate.

PU 立式空气处理机组

PU Vertical Air Handling Units

特点

本系列空气处理机组，风机和盘管采上下竖直方位安装。风量由 3400CMH 至 40600CMH，能量因使用环境与用途的不同可自 5RT 至 200RT，其冰水盘管一般有 4 排、6 排、8 排、10 排、12 排。立式机组占地面积小，在机房空间有限的場合可充分发挥优势。

Characteristics

The air blower and coil of this series air handling units are installed vertically up and down. The air volume ranges from 3400 CMH to 40600 CMH. The energy varies from 5 RT to 200 RT according to different operational environment and functions. The line numbers of the cooling coil are 4, 6, 8, 10, 12. The vertical type air handling units occupy small area. This advantage can be fully realized when the space of the motor room is limited.

材料规范说明

- 箱体**：采 30mm 厚度 PU 发泡保温板组合而成 外板采 0.5mm 厚度的烤漆板，内板为相同厚度的镀锌板，保温为 42kg/m^3 密度的聚氨酯发泡材。
- 盘管**：液管为直径 1/2"OD 紫铜管，其壁厚 0.38mm，鳍片为 0.115mm 厚度的铝片，集流管为镀锌管。
- 水盘**：采倾斜制作方式，且为内置式，其材质为镀锌板或不锈钢板。

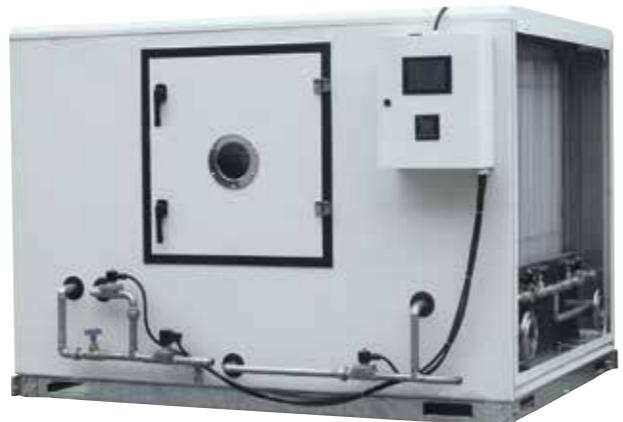

Material Standard Description

- Box:** It adapt 30mm thickness hard PU foaming heat preservation box board units.
- Outside boxboard:** It adapt 0.5mm thickness lacquer plate
- Inside boxboard:** It adapt 0.5 mm thickness galvanized plate. And 42KG/m^3 density Polyurethane foaming is for heat preservation
- Coils:** The liquid pipe is made of 1/2" diameter OD with 0.38mm thickness red cooper tube. The fins are made of 0.115mm thickness of aluminum plate. The catchment tube is made of galvanized.
- Water plater:** It adapts titled and built-in skills to produce the water plate, and the material of the water plate could be galvanized plate or stainless plate.

水洗加湿箱

Rinsing humidifier

特点

本系列水洗加湿箱，其功能设计可在于能够实现多种空气处理过程，具有对空气净化、加湿能力。风量由 10200CMH 至 200000CMH，此系列加湿器一般适用于加湿量较大及温湿度要求较高的场合，且有洗涤空气的功能，尤适用于制程空调。

Characteristics

The functional design of this series rinsing humidifier is that it can perform various air handling processes and can purify and humidify the air. The air volume varies from 10200 CMH to 200000CMH. This series humidifier is usually used where strong humidifying capacity and high humidity are required. It also has the function of washing the air, so it is especially applicable to processing air-conditioners.

材料规范说明

Material Specification

箱体：

采 1.2mm 不锈钢板制作。

喷嘴：

采锥形不锈钢喷头，标准牙口，外螺纹连接。

顺风板、挡水板：

采 ABS、PPS、铝合金、不锈钢等材质

Box:

The box is made of 1.2mm stainless steel plate.

Nozzle:

The nozzle is tapered and made of stainless steel, with standard mouth and male thread end connecting.

Air deflector, watertight shutter

The air deflector and watertight shutter are made of such materials as ABS, PPS, aluminum alloy, stainless steel, etc.

注:本表中的滤网压损是指终期压损，而盘管则指湿式盘管,若为干式盘管应乘0.77。

Note: in this table, the mesh pressure loss is the final pressure loss and coil is wet coil, if coil in dry, the value should be multiplied by 0.77.

干盘管

Dry Coil

特点

本系列干盘管，功能为去除设备产生的显热负荷，维持房间内绝对含湿量不变。适用于半导体制造车间，电子计算机房，程控交换机房等。

- 使用要点：盘管进水温度须高于进风露点温度1~2

Characteristics

The functions of this series of dry coil are to eliminate the sensible heat load generated by the equipment and to maintain the absolute moisture content in the room unchanged. This series of dry coil is designed for semiconductor manufacturing shops, computer rooms, SPC exchange rooms, etc.

- Operation gist: The inlet water temperature of the coil should be 1-2 higher than the inlet air dew-point temperature.

材料规范说明

- 干盘管制造规格参见盘管材质。
- 水盘采不锈钢，排水管管径为 3/4"。
- 进水集流管安装排水阀，出水管安装排水阀。集流管和进出水管材质为镀锌管。
- 形式有吊挂式、立式与天花板平躺式。
- 可配合客户需求采用不同的固定方式及进出水管方向。

Material Specification

- Refer to the coil material for the manufacturing specification of the dry coil.
- The drain pan is made of stainless steel. The drain pipe diameter is 3/4".
- The water inlet collecting pipe and the outlet pipe are both installed with drain valves. The material of the collecting pipe and the The types of the dry coil include suspension type, vertical type, and horizontal type.
- Different ways of fastening and directions of inlet and outlet pipe can be adopted according to customer needs.

盘管

Coil

冰水盘管
Cooling Coil

蒸汽盘管
Steam Coil

产品 Product	冰水盘管 Cooling Coil	热水盘管 Hot Water Coil	蒸汽盘管 Steam Coil
规格 Specification			
液管管径 Liquid Pipe Diameter	12.7mm / 15.88mm		
液管厚度 Liquid Pipe Thickness	0.38mm厚~1.0mm厚紫铜管 0.38mm-1.0mm copper tube	1.0mm厚紫铜管 1.0mm copper tube	
鳍片材质 Fin Material	铝片, 发色铝片, 紫铜片, 紫铜片镀锡, 不锈钢片 Aluminum sheet, colored aluminum sheet, copper sheet, tinned copper sheet, stainless steel sheet		
鳍片厚度 Fin Thickness	0.115~0.2mm		
鳍片形状 Fin Shape	板片式 Plate type		
鳍片间距 Fin Spacing	2.1mm,2.54mm,3.18mm		
边框材质 Frame Material	镀锌铁板, 不锈钢板 Galvanized iron plate, stainless steel sheet		
涨管方式 Tube Expanding Mode	水压涨管/机械涨管 Water pressure pipe / mechanical expansion pipe		
分布规格 Distribution Specifications	4分 A=31.75mm	B=27.5mm	
	5分 A=38.1mm	B=33mm

立式空调箱

vertical air-conditioning box

本系列空调箱以离心多翼式风车为参考尺寸。

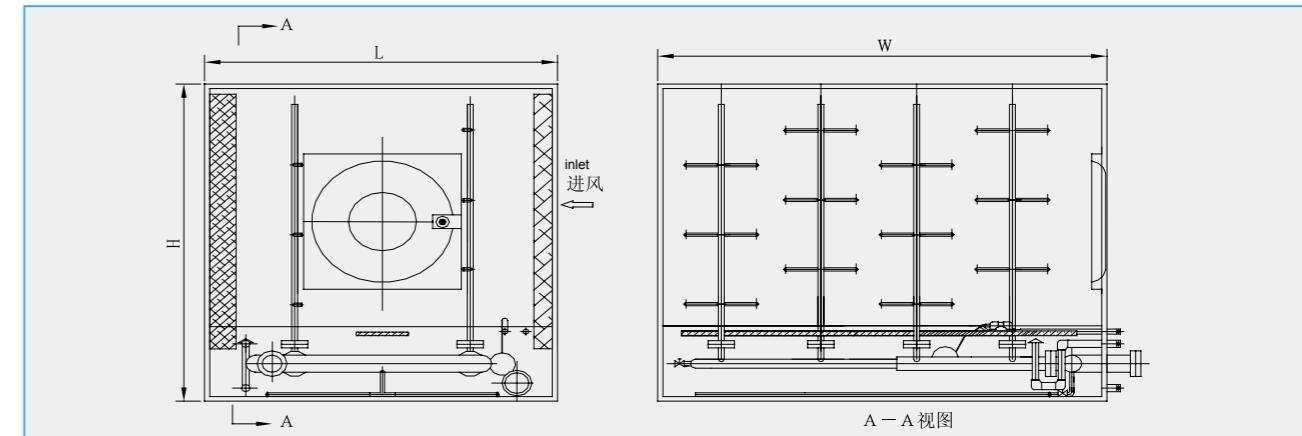

This series of air-conditioned box to centrifugal multi-blade type windmill as a reference size.
